

About New England Cryogenic Center

Our business is personal

At NECC, our business is scientific, but the way we go about it is extremely personal.

After all, our clients come to us in search of the most important things in life - the birth of children and the preservation hope for of health - and we never lose sight of the human and emotional nature of our work.

While we are one of the largest full-service cryogenic laboratories in the world, we offer our clients the kind of personal attention and emotional support they normally expect from a much smaller company. Time and again, the letters we receive from our customer clients are full of thanks for the personal care and support they received from our staff.

"Our experience with NECC has been full of the most important element: the human touch. Every time we've worked with you we have experienced compassion, caring, support and hope."

Our science is unsurpassed

Our dedication to personal service is equaled only by our commitment to scientific excellence. With a state-of-the-art facility and a highly trained staff of professionals, we offer advanced technology, unparalleled security and the highest scientific standards. Since 1982, we have earned an outstanding reputation for quality while providing individuals and medical professionals with a wide variety of fertility and other cryogenic services, including processing human cells and storing frozen cryopreserved embryos, sperm, umbilical cord blood, and other human tissue. We have pioneered additional research and technology like cord blood banking to help families achieve their hopes for a healthy life.

Our experience is priceless

When it comes to the science of cryopreservation, creating and preserving life, experience is paramount, and the experience of our staff is without equal. Located near Boston, in Newton, Massachusetts, we serve and benefit from one of the world's most advanced medical communities. Combined with our peerless history of success, our experience allows us to be an extraordinary resource for information and assistance to individuals and practitioners alike.
