Google Apps for Business

Work better together

Google Apps for Business

Security first

Work from Any Place.

Your office is wherever you happen to be.

With Google Apps, all your work is automatically saved in the cloud. You'll have access to your email, calendar, documents, and files no matter where you are and what device you're on. For your business, this means every employee and everyone you work with can be productive from anywhere, using any device with an Internet connection.

Work with Any Team.

Collaborate across departments and across the world.

Google Apps helps you and your team work faster and smarter by making it easy for everyone – employees, partners, vendors, anyone – to collaborate effortlessly across teams, companies and locations. Google Apps lets you share and edit many types of files – docs, spreadsheets, presentations and more – in real time. Forget all the time-wasting email back and forth over multiple file versions; storing docs in the cloud means everyone automatically has the latest version of any file.

Work better together

Google Apps for Business

Work at Any Time.

Work together real time across distance and across organizations .

Work with your colleagues like you're in the same room – even if you're on opposite sides of the world. You can arrange impromptu video chats right from your Gmail inbox or jump into the same document and edit it together as if you're sitting at the same computer. With Google Docs, just share with a couple of clicks and every member of your team has access to the right version of any document, spreadsheet or presentation. Everyone can jump in and make edits at the same time. No more back-and-forth email attachments and versions that you can't keep track of.

Work on Any Device.

Desktop. Laptop. Tablet. Mobile.
Your files are available on whatever device you choose.

Google Apps for Business means your data is always at your fingertips. On your company's desktop or your home laptop. On your corporate smart phone, your personal tablet, or a borrowed device. On a PC or Mac – it's all there, all the time. You'll never again have to worry about making sure you have access to the right device to get your work done.
